WATERJET SPAS

YOUR HOME RESORT STARTS HERE

www.waterjet.com.cn

THE HEART OF YOUR HOME RESORT IS THE HOT TUB

You deserve a personal getaway. With a personal Home Resort you can build a private sanctuary away from the stresses of the day. WaterJet spas take you away with luxury hydrotherapy and are designed to complement your lifestyle at remarkable value to match any budget. Create a constant source of entertainment that you can enjoy with loved ones as you listen to music, watch your favorite programs and share each other's company in the most relaxing place in the world: Your home. It's time to live life on a whole new level.

With an unmatched selection of dynamic spa molds-ranging from intimate hot tubs to commanding 10-seat spas-there is a size and shape to accommodate any party. Each hot tub is ergonomically designed to hug the natural contours of your body and rehabilitate key stress areas like the neck, back and feet. WaterJet spas are designed with your complete rejuvenation in mind. The best times of your life begin here. Start making memories today with WaterJet spas.

WWW.WATERJET.COM.AU

THE WATERJET SPAS ADVANTAGE

WaterJet spas is dedicated to a simple vision: To enable busy families to create daily enjoyment, quality time and overall well-being with a ready-and-waiting oasis right in the own homes. WaterJet spas' success in this pursuit has earned numerous international awards and national media recognition.

Our vision, passion and quality standards are at the center of the company, manifesting in products that are unmatched in the industry while inspiring imagination and changing the way you feel.

Widest Selection

WaterJet spas offers the largest range in the industry, ranging from intimate models to oversized Spas you can swim in. Add thousands of option combinations and you're guaranteed to have a spa that is best suited to your needs.

A Proven Record

WaterJet spas have earned several distinctions such as Spasearch Certification for several years running, Consumer Best Buy Awards and recognition in energy efficiency.

Standard Of Excellence

Enjoy your hot tub with peace of mind, knowing that each spa design is listed with the CE, ROHS, C-TICK, SAA, UL and ISO a third-party organization that demands the most rigorous safety standards.

Value

No other manufacturer packs as many standard features into one spa as WaterJet spas. You have a choice and WaterJet spas reward your decision to bring us into your home by offering you the highest quality products at unbeatable value.

Experience what so many others around the world are already enjoying. Embrace the WaterJet spas Home Resort lifestyle in your home and discover the relaxation you didn't know you couldn't live without.

HEALTH BENEFITS

Imagine if you could relieve muscle soreness and tension, daily stress and promote a deeper, more restful sleep in the comfort and convenience of a home retreat. Introducing Hydrotherapy by WaterJet spas: The unique blend of air, water, heat and tactile therapy that make WaterJet spas the logical choice.

Overall Well-being

Unwind in the tranquility of therapeutic hot water that raises body temperature, bolsters the immune system and triggers endorphins-the body's natural pain blockers.

Pain Relief

When it comes to treating muscle aches, no other manufacturer comes close to WaterJet spas. Our Spas feature strategically placed and varied jets that produce energized streams of rhythmic pressure. WaterJet spas can deliver a full-body massage simply by moving from seat to seat.

Arthritis Relief

Water buoyancy greatly relieves joints and muscles of constant pressure. According to the Arthritis Foundation, "Doctors often advise soaking warm water before beginning your daily activities to help relieve the pain." Additionally, Warm temporarily relieves stiffness and aches, increasing flexibility.

Improved Sleep

Hydrotherapy before bedtime may assist in getting a more restful night of sleep. The National Sleep Foundation recommends soaking in hot water before sleeping due to the associated calming effects. When exiting the spa, the body's internal thermostat drops and signals the mind that it is time to sleep. Both effects result in a truly refreshed morning without the grogginess that sleep aids can leave behind.

Quality Time

Reconnect with friends and family in the most relaxing environment imaginable: Soaking in a hot tub at the heart of your Home Resort. Swap stories with friends or enjoy playtime with the kids while you encounter the beauty of a lifetime. Light up the night with romantic LED lights for more intimate moments. Rediscover your personal relationships!

Lasting Value

When you bring home a WaterJet spas, you create a daily oasis that you and your family can enjoy any time of the year. Not only is it a functional entertainment source, but the sleek design and smooth edges make your spa the centerpiece in your backyard or garden. Best of all, a WaterJet spas may increase your property value without increasing your taxes.

Welcome WaterJet spas into your home and start enjoying these benefits and more today!

SPA SEATS

Sitting in a WaterJet spa is an experience like no other. Each seat is finely crafted to gently cradle your body in key areas. Molded armrests ensure maximum support, while Tactile Therapy Bumps allow you to massage tension out of feet, palms and wrists. Most importantly, WaterJet Spas has devoted special care to placing jets in strategic locations and targeting areas where you need relief most like the neck, shoulders and lower back.

KOOL SEAT

Allow your body to acclimate to new temperatures—getting in or out of the spa—with this elegantly designed transition seat, which is elevated in order to keep you half-immersed.

LOUNGER

This seat represents the very best in relaxation and features spa jets that target the upper and lower body for unrivaled hydrotherapy. The ergonomic design ensures that bathers don't float out of the seat. Perfect for gracie soaks, the lounge seat is a wonderful reward after a long day.

BENCH

When accommodating a group is a priority, there is no substitute for WaterJet spas bench seating. Guests are given the greatest range of movement and side-by-side seating makes it easy to get closer for more private encounters. WaterJet spas takes special care to ensure that the foot well is large enough to accommodate the entire group.

CONTOURED

Designed to conform to the body's natural lines, contoured seats support your curves with rounded backs, molded armrests and bucket seat bottoms.

Pillow Headrests

Comfortable pillow headrests complete the therapeutic experience and allow you to lean back and let the warm embrace of our WaterJet spas soothe you. Select WaterJet spas feature pillows with a medium-soft firmness created from high density foam to provide the perfect blend of support and comfort.

CASCADE

INFINITY

NECK

QUAD

BUMP

TAKE CONTROL

Adjustable Therapy System

For spa owners that refuse to compromise on hydrotherapy, the Adjustable Therapy System (ATS) represents the pinnacle in spa relaxation.

Customize your experience with seven different massage programs easily accessed by a nearby dedicated control panel. This allows you to enjoy the soothing relaxation of the ATS seat without activating the rest of the spa. Not only will you enjoy premium hydrotherapy, but you will also experience tremendous cost and energy savings.

Ergonomic in design and available in either a contoured captain's chair or lounge, these impressive seats feature 14 spa jets powered by a dedicated motor, which delivers continuous, constant pressure. Experience the ATS for yourself and discover new depths of pleasure.

Control Panels

WaterJet spas are managed by easy-to-use control panels that operate everything at a touch including the pumps, lighting and heaters. All control panels have the following features:

- Auto-Stratton Mode with programmable times
- Auto-Temperature Mode to keep temperature from falling below 100° F
- Auto-Heat Off when spa is not in use
- Self-Diagnosis with recommended solution
- Backlit buttons for easy-to-read display

2000 Control Panel

This advanced panel features a number of advanced functions, such as:

- Exclusive "Sounds Good" System
- 23 light settings
- Safety lockout feature
- clock

ATS CONTROL PANEL

2000 CONTROL PANEL

JET CONFIGURATIONS

WaterJet spas feature several jet configurations to satisfy your hydrotherapy demands. Many models feature full body massages by simply moving form seat to seat. Best of all, WaterJet spas offers a generous selection of shoulder and neck massage options for spa models that can accommodate them.

High Velocity Jets:

Tornado

Mini Tornado

Rotation Jets:

Power Storm Twister

Mini storm Twister

Shower Jets:

Master Blaster

Volcano

Neck Jets

Two jets target stress points on either side of the neck. These jets receive a special pillow.

Neck Blasters

These three jets pinpoint the base of the neck and provide a penetrating massage. This configuration also receives a special pillow.

Quad Blasters

Four jets provide unparalleled rehabilitation for the neck and shoulders. It's like having your own personal, on-demand masseuse of a lifetime; rest your head on a comfortable custom pillow.

Spacious Foot well

WaterJet spas understands that taking care of your lower body is just as important as your upper body. That's why WaterJet spas feature spacious and textured foot-wells and innovative designs, Tacile Therapy Bumps and dome jets that target tired feet.

ENTERTAIN IN STYLE

Take your spa experience beyond hydrotherapy and treat your senses to the finest entertainment available. WaterJet spas are a visual and aural delight, striking the perfect balance with soothing waterfalls, elegant lighting and state-of-the-art stereo and video equipment. WaterJet spas builds an entire entertainment center into your spa, making your Home Resort an all-in-one solution for your relaxation needs.

Waterfalls

These dramatic water fixtures create a tropical environment, transporting you to the exotic paradise of your imagination. Waterfalls come in classic cascade or vertical fountain styles and are specific to each series. The new four-stream Rainfall water fixture features high-angle trajectory that emulates the serenity of rain. LED lighting options also enhance the look and feel of any waterfall.

CASCADE WATERFALL LED
Traditional waterfall that gives your spa a classic and timeless style.

UMBRELLA WATERFALL
New for 2010

VERTICAL WATERFALL
Turn your spa into a fountain with this high trajectory water feature.

LED Lighting

For your evening spa soaks, LED lighting options can be found along the top perimeter of the spa in the form of topside lighting and illuminated, valves and logos on some spas. Best of all, LED lighting can be programmed to alternate between each color on the color wheel or shine a particular hue to match your mood.

LED PERIMETER LIGHTING

LED UNDERWATER LIGHTING

Audio & Visual Entertainment

Enhance your spa experience with premium stereo equipment that is iPod-ready. Options include iPod-ready receivers, satellite-ready receivers and powerful subwoofers. Each option features and elegant stereo housing recess with a smoke acrylic door for added protection from the elements.

VOLCANO JET

POP-UP SPEAKERS

AVAILABLE 17" AUTO RAISING LED TV

CABINET DESIGNS

Every spa is constructed with elegant and durable paneling to protect your investment and add lasting sophistication to our Home Resort. The panels protect the spa equipment from the elements, but are easily removable if maintenance is required. WaterJet spas also provide protection for the underside of your spa with a resilient bottom tray that serves to keep out rain, dirt and pests. Advantages to WaterJet spas cabinets include:

- NO Warping, shrinking and decay
- No cracking, splitting or chipping
- Best retention for lower operating costs
- Removable panels for easy access
- Moisture resistant
- Flame retardant
- Soundproof

WaterJet Preferred Panels

These highly durable panels come standard on all WaterJet spas in a variety of colors that complement any outdoor design and mimic the look of Clear Redwood. WaterJet spas cabinetry is maintenance-free, weather resistant and flame retardant. Best of all, your spa panels will maintain their rich color with UV light inhibitors integrated into their construction. Classic Series spas benefit from standard WaterJet Designs Paneling.

WaterJet FGC Panels

The natural look of WaterJet FGC cabinets will take your breath away and complement the other WaterJet spas Home Resort products in your backyard or garden. Available in a variety of natural finishes, these panels not only look great, they are durable, weather resistant and maintenance-free.

Exclusive WaterJet Teak

When your backyard design features teak patio furniture, only WaterJet spas gives you the ability to coordinate with the rest of your Home Resort. Surround your spa with elegant teak cabinet that is beautiful and tightly woven to protect your spa. Make your spa truly stand out with this one-of-a-kind look.

Corner Cabinet Lighting

Gorgeous corner panel lighting illuminates your spa, making it a trophy-piece of your Home Resort. Perfect romantic evenings in or out of your spa, your spa will drip with style and lasting elegance. Available on WaterJet Preferred cabinets only.

COVER & LIFTS

All above-ground WaterJet spas come with a standard cover to maintain heat retention, lower operating costs and keep debris from spoiling your water. Each cover features:

Child Safety and Security Locks

Safety straps employ a lock-and-key device to protect young children from unsupervised entry. Your family's enjoyment and safety is important to WaterJet spas.

Energy Efficiency

The interior lining, crafted of polyester-reinforced PVC with Mylar coating, provides enhanced heat retention. A dense foam core and snug, zippered fit-with padded flaps all around the cover's edges to prevent heat seepage-also ensure superior thermal insulation.

UV Protected Material

WaterJet spas covers are 100% marine-grade with a vinyl top, filled with 2-pound virgin foam core and supported by 18-gauge steel C-channel beams. Each cover is rated to withstand 1,500 UV-hours of protection to prevent cracking, splitting or fading. Mildew inhibitors also ensure cleanliness and sanitation.

Tapered Design

WaterJet spas covers are engineered to protect your hot tub from condensation. The cover is designed with a tapered height, angling down-ward from five inches in the center to three inches on the sides to drive off rain and prevent precipitation from pooling.

Cover Lift

All covers can be equipped with a convenient cover lift that makes removing the cover a breeze. With a WaterJet Saps cover lift, all it takes is one person to remove any cover and they can do it with one hand! Best of all, the cover lift ensures that the cover is protected and eliminates the need for extra storage space as your cover conveniently folds out of sight. The cover lift can be mounted at the top or bottom of the spa to match.

FILTRATION

From hydrating to sanitation, pure clean water is important for any closed system including swimming pools and spas. Left untreated, these bodies of water are subject to harmful, microscopic bodies known as microbes that can foul water and cause odor, film and mold. The enjoyment and safety of your family is WaterJet Saps' main concern, offering you several choices in maintaining the silky smooth water you deserve.

Exclusive Bio-Clean Filters

WaterJet spas exclusive filter cartridges utilize a special agent called Microban to protect your spa water from pathogens and bio-matter that can build-up. Microban is special antimicrobial technology that inhibits harmful microbes from reproducing. Other filters feature "sprayed on" antimicrobial agents that wash off or erode over time and diminish their effectiveness. WaterJet spas Bio-Clean filters filter by aggressively molding the agent into the filter and extending its effectiveness to the lifetime of the filter. Additionally, cleaning WaterJet spas filters is as simple as hosing them down once a month instead of overnight soaking. Bio-Clean filters are distinguished by:

- Up to 18-month filter lifetime
- Easy installation and removal
- Reduced chemical use and cost
- Softest water for children
- Clean in minutes instead of hours

Exclusive WaterJet Filtration System

Paradise Series spas can be equipped with this optional, independent and discreet filtration system, which can be programmed to match your hot tub use. An efficient dual filter design ensures that your spa water is 100% filtered before being circulated back into the spa. Best of all, this efficient unit pumps 35-gallons a minute, which means you and your family never have to wait for fresh, clean water.

Exclusive 24-Hour Filtration +System

When your water clarity demands all-day care, this optional filtration system is the answer. Designed with silence in mind, your ears would never know that this unit pumps 30-gallons a minute. But it's a difference you'll definitely feel when you slip in to the silky water.

WATER CLARITY

Ozone is a naturally occurring substance in the Earth's atmosphere and features several purification qualities that have been used to clean air and water for centuries. Ozone is an important element of any clear water plan and is essential to keep your spa water clean and pure for you and your family. WaterJet spas Ozonators purify hot tub water several times faster than standard chemical treatment. The gentle properties of Ozone result in absolutely no deterioration to your spa or irritation to skin and eyes. Your comfort is WaterJet spas' number one concern.

Exclusive WaterJet Quest Ozonator 1000/2000

The patented design of WaterJet Quest Ozonators feature exclusive moisture-sensing technology that delivers virtually maintenance-free operation. The unit automatically shuts off when moisture is detected inside. Once the moisture has dissipated, the unit starts again automatically. The WaterJet Quest Ozonator is ballast-free with a completely sealed, solid-state operating system. Additional convenient features of Ozone are:

- Reduced chemical use means increased savings
- No wear and tear on spa equipment
- Faster water purification
- Easily replaceable cartridges
- Increased spa lifetime

POWER YOU CAN DEPEND ON

Exclusive Large Capacity High Performance Switchless Motors

WaterJet spas switchless booster pumps are built with quality you can trust and power you can feel. Our motors feature low and high speeds with exclusive switchless technology. The low speed is used for filtration and heating while the high speed is used for creating a pressurized massage. Instead of a mechanical switch with springs that physically change between low and high speeds, WaterJet spas motors are switchless and use electrical relay that provides resiliency and protects the motor. Each switchless pump has a 50% thicker and longer shaft than standard pumps for increased durability and output. Spa owners will experience a 50% increase in energy efficiency during filtration mode since the pump is able to fully operate at only two amps.

Exclusive WaterJet Wet End

Wet ends are the sections of the pump that come into contact with spa water, making high-endurance parts a necessity. Exclusive WaterJet wet ends are crafted from virgin plastic to eradicate leaks, cracks and chemical damage. These wet ends are constructed with a custom-fit impeller that ensures maximum efficiency, lower operating costs and quieter operation. The Smart Wash-Out System generates a cyclone effect around the seals that prevents chemical build-up and corrosion.

WaterJet WET END

Valves

Valves are designed to direct the flow of air or water to different areas of your spa. WaterJet spas hot tubs can feature any combination of the following:

- Gate Valves: These valves are located inside the equipment area and are used during "wet" service to prevent water from draining out of the spa when equipment must be removed for maintenance.
- Diverter Valves: Available in one-inch and two-inch sizes, these valves are located in the topside of your spa and divert water flow from one area to another. This allows you to increase pressure in some seats while lowering pressure in others.
- Air Venturi Valves: Also located on the topside of the spa, these air valves can be activated to add air pressure to specific jets for a more vigorous hydrotherapy experience.
- Drain Valves: Draining your spa is simple with this convenient drain valve. Simply open the equipment panels, attach any garden hose to the drain valve apparatus and open the valve. The spa water will drain without the use of a pump. Conveniently, most WaterJet spas can be upgraded with a Cabinet Accessible Drain Valve that eliminates the need to remove any panels.

DIVERTER VALVE

AIR VENTURI VALVE

EFFICIENT HEATING

WaterJet spas are designed to heat efficiently through the use of state-of-the-art heaters that transfer the maximum amount of heat directly to the water.

Exclusive ACC Heat Exchanger

The ACC Heat Exchange is the best 5.5kw/3kw hot tub heater in the spa industry. From the moment water enters the heating chamber, warmth is immediately transferred due to the ACC Heat Exchanger's patented design. Additionally, the oversized surface area of the heating chamber means more water can be heated quicker. Lastly, high-density insulation drives heat into the water instead of dispersing heat into the air reducing operating costs and increasing efficiency.

Flow-through Heater

The Family, WaterJet spas are equipped with an advanced flow-through heater. With a standard five year warranty, this heater is designed to perform .Developed with your comfort in mind, WaterJet spas flow-through heater runs whisper-quiet so all you hear are your sighs of relaxation.

INSIDE MY SPA

Each WaterJet® spa is constructed with the greatest precision. Our professional engineers and experienced production team craft each spa to last.

The Strongest Spa Shell in the World

Durability is paramount when it comes to your home investments. That's why WaterJet® spas utilize the exclusive Fiber

The finest acrylic sheets are vacuum molded into shape, then reinforced with vinyl ester and fiberglass. After curing, the shell receives a resin filler coat, fiberglass and calcium carbonate. Stiffener reinforcement supports and 1" inch angled irons are added to ensure maximum strength. A final filler coat is applied to seal, bond and toughen the overall structure.

Reinforced Framework

Each WaterJet® spa is built on a structure of pressure treated wood that resists corrosion, decay and insect damage. The frame is constructed from a sturdy design of rails and cross-bracings which are secured by 1-inch galvanized staples for solid strength, while vertical supports are shored with plywood corner gussets and vertical angle bracing.

EFFICIENCY

Our spas are 12% more energy efficient than foam filled spas.

Our spas are among the most energy efficient in the world, using as little as 138 kWh per month or costing as low as \$9.90 per month to operate. Providing an R-20 value, our Weather Pro RTB insulation harnesses all thermal gain from the pumps and heater inside the spa cabinet, while reflecting the colder air away from the spa cabinet - thus heating the spa shell and water. Our insulation also contains natural borates which are undesirable to insects and rodents.

Certified to the California Energy Commission.

Energy efficiency has never been so important and that's why every component is designed and engineered to come together to create the most energy efficient spa system. WaterJet® Spas is among the few manufacturers to be certified to the California Energy Commission's stringent Title 20/Section 1606 energy standards for portable spas.

Our spas are insulated like a well-insulated house

Perhaps you've heard horror stories about the cost of heating a spa. Relax. This is where WaterJet® - smart insulation design makes all the difference.

Like a well-insulated house (see illustration 1), the equipment that runs your WaterJet® Spa is blanketed with a thick layer of insulation that protects the spa machinery - and your investment. And see how the heat given off in running your spa is reused to heat the water? This energy-efficient system makes it possible to heat your spa for much less than you'd think.

Many spa manufacturers tend to use inferior spray insulation (see illustration 2) and even place precious spa machinery too far away - even outside your spa cabinet. Such systems, in effect, release valuable energy to the outdoors and needlessly inflate your energy costs.

Well insulated RTB insulation

Poorly insulated spray insulation

WaterJet® Spas are 12% more energy efficient than foam-filled spas!

SO MANY CHOICES OF WORLD CLASS SPAS

ONLY FROM WaterJet® SPAS

Paradise series

The Paradise series spas is the ultimate fusion of an entertainment center with the hydrotherapy of a hot tub. Rediscover your favorite programs and movies in 17-inches of LCD high-definition or your personal mix on DVD stereo equipment-while up to 110 jets take you away to paradise. These spas are out of this world!

Caribbean series

Caribbean series spas represent the very best the spa industry has to offer. Experience unmatched rest and relaxation with neck jets, dome jets, waterfalls and state-of-the-art entertainment options. The stunning look of exclusive WaterJet® Designs cabinets will make the heart of your Home Resort as unique as you are.

Fitness series

Want to feel healthier, boost your energy and improve your quality of life? Experts agree that regular exercise is beneficial for your mind and your body. Frequent exercise offers many health benefits including improving your cardiovascular system, reducing the risk of many health problems and increasing muscular strength and balance. However, many people find it hard to fit a visit to the gym into their busy day. With a WaterJet® spas Fitness spa, you can have the convenience of a complete aquatic gym in your very own backyard or garden and can start a fun and effective exercise routine that you will look forward to every day.

Fitness spas are available in many sizes from a compact 15' aquatic fitness center that is the same size as most standard hot tubs to a generous 17' Fitness spa with independent swim and relaxation zones. Bring a WaterJet® spas Fitness spa into your home today and put your health and wellness first!

FITNESS SERIES

Want to feel healthier, boost your energy and improve your quality of life? Experts agree that regular exercise is beneficial for your mind and your body. Frequent exercise offers many health benefits including improving your cardiovascular system, reducing the risk of many health problems and increasing muscular strength and balance. However, many people find it hard to fit a visit to the gym into their busy day. With a WaterJet spas Fitness spa, you can have the convenience of a complete aquatic gym in your very own backyard or garden and can start a fun and effective exercise routine that you will look forward to every day.

Fitness spas are available in many sizes—from a compact 15" aquatic fitness center that is the same size as most standard hot tubs to a generous 17" Fitness spa with independent swim and relaxation zones. Bring a WaterJet spas Fitness spa into your home today and put your health and wellness first!

FREQUENTLY ASKED QUESTIONS

Is it difficult to maintain a clean spa?

WaterJet Spas come with a state-of-the-art filtration system that makes having clean water for your soaks a painless task. Follow the simple maintenance steps included in your owner's manual to properly test the chemical levels in your spa. These tests are quick and easy and will ensure continued enjoyment of your WaterJet Spas for years to come.

Does a spa need to be drained and refilled for each use?

No. Drainage and refilling are typically done every three to four months depending on the number of soakers, frequency of use and proper water treatment.

Is it better to place the spa inside or outside?

Indoor spa installations typically cost more, which is one of the reasons why most hot tubs are placed outside. Structural considerations include making sure your indoor property can accommodate the weight of the spa and provide humidity ventilation. Additionally, check with your area's building department for any indoor spa building codes. WaterJet Spas offers an alternative to building your spa inside by enabling you to build your spa outside within a spa enclosure or beneath a villa or gazebo.

Is any plumbing required for my WaterJet Spas ?

All above-ground WaterJet Spas comes pre-plumbed. Just add water. WaterJet Spas Designer in-ground spas can be built without jets so you can customize the plumbing yourself.

What are the electrical requirements for a spa?

If you own a 240V spa, it must be hardwired to the power supply by an electrical contractor and approved by a local building /electrical inspector. Contract your local WaterJet Spas dealer for more information.

Are all equipment packs internal?

All above-ground spas discreetly hide the equipment pack from view within the spa cabinetry. The Designer in-round spas require an external equipment pack and heater.

What happens if I forget to turn off my spa after using it?

WaterJet Spas have sophisticated equipment packs that have auto-shut off timers. Your spa will turn itself off after 15 minutes.

Are there any concerns with having children or older people in the spa?

Children should never be allowed in the spa without adult supervision. Additionally, children under 10 years should not be in water temperature above 98° F.Older spa soakers should also keep temperatures below 102° F and consult a doctor before using a hot tub if they suffer form circulatory problems .

What are the benefits of owning a spa?

In addition to possibly increasing property value without increasing property taxes, owning WaterJet Spas has many health and lifestyle benefits, such as increased blood circulation, pain relief and more restful sleep. Experience this life-changing event for yourself and contact your local WaterJet Spas dealer today!

WATERJET SPAS

YOUR HOME RESORT STARTS HERE

WaterJet Spas has a proven history of bringing the finest in luxury hydrotherapy to homes around the world. With the most hot tub molds offered by any manufacturer and a bevy of options that cover everything from full-body massages to state-of-the-art entertainment systems, your custom hot tub will be as unique to you as your personal style. Whether you're looking to create a private oasis at the end of a long day or a relaxing way to stay healthy and keep fit, WaterJet Spas has the perfect solution custom tailored to you.

HOW TO PREPARE FOR YOUR NEW SPA (PART 1)

Getting Ready for the Experience of a Lifetime

Your WaterJet Spas will offer you and your family years of enjoyment once you take the time to properly prepare your Home Resort location prior to delivery. WaterJet Spas cares about you, your family and your investment. We strongly recommend that you have a qualified, licensed contractor perform the installation of your in-ground or portable spa.

Planning Your Spa Atmosphere

How will your spas be used? How you use your spa will determine where and how it will be positioned. Spa meant for family time or hot tub parties should have a wide clearance on all sides for activity. If your spa is meant for relaxation or intimacy, you may want to create a more private area surrounded by a coordinating WaterJet designs gazebo.

Plan for Your Environment

Consider the weather and climate of your region and place your spa accordingly. If you experience inclement weather conditions like rain, snow or wind, you may want to locate your spa closer to your home so that you have a convenient area for changing clothes.

Privacy Considerations

When your hot tub is your escape from the world, it's important to keep your spa experience hidden from prying eyes. Before you set your spa down, gauge your neighbors' sight-lines to minimize any invasion of your privacy. Also consider your surroundings for every season. Leafless trees won't do much to provide privacy during fall and winter.

A Spa with a View

Think about which seats in your spa you might use the most and which direction they face. You should make sure they face something pleasant to look at-like the sunset or a landscaped area of your garden.

Personal Safety

Do not place your spa within 10 feet (3 meters) of overhead power lines. Ensure that the spa is positioned so that access to the equipment compartment and all side panels will not be blocked. Be certain that your installation meets all city and local safety codes and requirements.

A Clean Spa is a Healthy Spa

Prevent dirt and contaminants from being tracked into your spa by placing a mat or water-filled basin at the spa's entrance so bathers can clean their feet before getting in. Keep the path to and from your spa clean so that no one accidentally brings dirt into your hot tub.

HOW TO PREPARE FOR YOUR NEW SPA (PART 2)

Preparing the site

Hot tubs can be very heavy. The foundation it rests on must be able to support the weight of the hot tub as well as the water and any occupants. If the foundation isn't strong enough, it may shift after the spa has been placed, causing undue stress that can damage your hot tub.

Calculate Your Spa Weight

The weight of your full spa can be calculated by multiplying the number of gallons it holds by 8.33 and then adding the product to the spa's dry weight.

Place your spas on an elevated foundation that is similar or equivalent to a 3" to 4" concrete slab. Pavers, gravel, brick, sand, timbers or dirt foundation are not adequate to support the spa. Indoor spas should be placed on flooring that will not be damaged or stained.

Wood decks or other elevated structures should be examined by a structural engineer before a spa is placed this kind of foundation. The structure must be able to support 150 pounds per square foot.

Note: It is highly recommended that a qualified, licensed contractor prepare the foundation for your spa.

Special Instructions for In-Ground Spas

Please refer to the WaterJet Spas website at www.waterjet.com.au for information regarding site preparation for in-ground designer series hot tubs.

From Delivery to Placement: Ensure Your Spa Fits

The specification chart in this brochure ("Dry Weight") lists your spa's model and dimensions as it sits on the delivery cart. Compare these dimensions to any possible obstructions along the delivery path, such as gates, sidewalks and doorways. It may be necessary to partially remove a fence or cut branches to provide a clear route. Keep in mind that 8' spas require a minimum clearance of 42" in width and 9' in height. Ensure that any 90° turns along the path will accommodate the spa. During delivery, the spa must remain on the delivery cart at all times. Note: If there are stairs along the delivery path, make arrangements with your local WaterJet Spas dealer to get around them prior to delivery.

Check the following Widths

- ✓ Gates
- ✓ Protruding Electric and Gas Meters
- ✓ Air Conditioning Units

HOW TO PREPARE FOR YOUR NEW SPA (PART 3)

Check the Following Heights

Eaves, Branches, Rain Gutters, etc.

Remove the Following Obstructions

Doghouses, Trashcans, Firewood, etc.

Special Circumstances

In rare cases, a crane may be easier- or the only way- to place your spa in your chosen location. Your WaterJet spas dealer can help you arrange this service. The cost of a crane is typically not included in standard delivery service.

Electrical Requirements: US and Canada 240V Electrical Installation

All 240-Volt spas must be permanently connected (hardwired) to the power supply. Spas wired in any other way will void your warranty and may result in serious injury. Any electrical circuit must be installed by an electrical contractor and approved by a local building /electrical inspector.

GFCI & Wiring Requirements

The power supplied to the spa must be on a dedicated GRCI protected circuit as required by ANS/NFPA 70 with no other appliances or lights sharing the power.
